

Nyaya Mitra

Law, made approachable.

An AI legal-awareness assistant for India that bridges the gap between citizens and the law. It does not replace lawyers or the judicial system.

$ hackathon_proposal --region=india

// The problem

01

Law feels out of reach

Even a basic question, such as what a will needs, pushes people toward costly consultations.

02

New laws, new confusion

The BNS, BNSS and BSA replaced the IPC, CrPC and Evidence Act. Even practitioners are relearning sections.

03

Information is scattered

Bare acts, amendments and judgments sit across many sites, in dense legal language.

The result: people go without guidance, or lean on unverified sources.

// Our solution, and who it is for

One AI model, built only for Indian law, that explains, guides and cites. Each problem has an answer: plain language for the confused, updated sections for the new codes, one trusted place for the scattered.

Normal mode

- Citizens and casual users
- Documents needed for a will
- Terms to add in a pre-nup
- How adoption works, step by step
- Tenant and Landlord disputes

Professional mode

- Lawyers, students, compliance teams
- Old IPC to BNS mapping
- Constitution, amendments, SC and HC citations
- Ambiguous legal terms explained

// Built to prevent misuse

01

Sign-up required

No anonymous access, so every chat is accountable.

02

Warnings

Loophole-seeking or illegal-intent queries end the chat with a warning.

03

Three strikes

After 3 warnings the account is suspended and reported.

04

Follow-up questions

Vague prompts get clarifying questions first, to avoid misinterpretation.

// How it works: workflow

01

Sign up

Choose Normal or Professional mode

→

02

Ask

A follow-up if the prompt is vague

→

03

Safety check

Intent classifier and warnings

→

04

Retrieve

Matching sections and judgments

→

05

Answer

Plain explanation with citations

```
$ if (safe(query)) answer(query) // every question is checked first
```

// Technical architecture and stack

<UI/>

Frontend

React / Next.js web app

→

{API}

Backend

Python, FastAPI, JWT login

→

[SEC]

Safety layer

Intent classifier, warning counter

→

<LLM/>

AI core

LLM with RAG, vector DB (FAISS or Pinecone)

→

(DB)

Legal data

Bare acts, BNS / BNSS / BSA, SC and HC judgments

```
$ answer = explain(retrieve(verified_sources)) // retrieved first, then explained
```

// Why a specialised model, not a general one

We prefer a senior lawyer over a rookie for their training and experience.

In the same way, we should choose an AI built for legal work over a generalised one.

Where a specialised model wins

- Answers grounded in a verified Indian legal corpus
- Every answer cites its section or judgment
- Two modes for two kinds of users
- Sign-up and warnings reduce misuse
- Asks follow-ups instead of guessing

// How we compare with existing apps

	Citizen-centric apps (Nyaya-Guru, Law-Central)	Professional tools (CLAW)	Nyaya Mitra
Built for	Everyday users	Law professionals	Both, through two modes
Strength	Easy, approachable guidance	Depth for practice and research	Plain language and deep analysis
Gap	Limited depth for professionals	Hard for non-lawyers to use	Not a substitute for an advocate
Misuse controls	Not our focus here	Not our focus here	Sign-up, 3 warnings, suspension

One product that serves the citizen and the professional.

// Common questions

Is this legal advice?

No. It gives information and an informed starting point. For representation, consult an advocate.

How is it different from ChatGPT or Gemini?

It is purpose-built for Indian law, grounded in verified sources and protected by misuse controls.

What if my question is unclear?

It asks follow-up questions first, so the answer fits your actual situation.

Which laws does it cover?

Indian law for now: the new criminal codes, the Constitution and central and state acts.

// Common misconceptions

"It will replace lawyers."

Never. It helps people arrive at a lawyer better informed.

"AI answers are always right."

Every answer cites its source so users and professionals can verify it.

"It can help me find loopholes."

Such queries trigger warnings. Repeat offenders are suspended and reported.

"It can handle my whole case."

It explains and guides. Filing, representation and judgment stay with advocates and courts.
